

Service Definition

Enterprise Architects (EAL) Digital Strategy and Roadmaps service helps clients to rapidly establish a Digital Strategy & Roadmaps using our Enterprise Architecture Capability Development (EACD) practice signature product. EAL will plan to integrate your existing legacy systems into state of the art, modern, open source enterprise solutions using agile delivery techniques. EAL will develop a Digital Architecture blueprint aligned to Digital Standards and will ensure appropriate cloud technologies support the business objective.

How we deliver this service

EAL will initially assess the current landscape to determine the on-premise customer systems and how these existing systems technically integrate. This impact assessment will define the interfaces between each component. A data architecture assessment will be performed to understand the key information objects and how these are used within the overall system. The Digital Strategy is created from outline requirements and a digital target architecture will be designed to provide a digital layer integrated with the client's core systems even if they are on-premise to deliver digital transformation. Digital transformation is expressed by roadmaps and designs.
