

Service Definition

Enterprise Architects (EAL) Digital Transformation service is a turn key solution that will take your Digital Strategy and convert this into a solution that will move all external interactions to digital by default services, replacing existing manual processes with automated processes empowering staff to manage the system with flexible and easily maintainable business rules. This service will also seek to modernise internal systems, replacing them where necessary to improve the efficiency of core processes.

How we deliver this service

At a high level we will design a Digital Platform which will achieve:

- A single digital platform encompassing and presenting all client web facing services;
- Supports delivery of a unified modern responsive user experience that can be delivered across desktop, tablet and mobile device types;
- Able to be easily developed and deployed, requiring a minimum of programming;
- Readily maintainable and extensible for future need;
- Able to provide a security model that will enable front-to-back real-time transactions;
- Able to manage detailed identity concepts;
- Able to integrate with customer core and legacy systems;
- Able to support such areas as community interactions, social media, blogs, Knowledge Management, etc;
- Open-source by preference;
- Cost effective
