

Service Definition

Enterprise Architects (EAL) EA content development service allows organisations to select from our extensive catalog of over 200 architecture artefacts across business, information, systems, technical and security architecture domains. Our rich catalog of artefacts, diagrams, matrices and catalogs can be used and populated as a service to the client. Our core artefacts are based on TOGAF 9.1 with a wide array of extensions especially within the business architecture and security architecture domains tailored to the client environment in all cases. Sample artefacts and deliverables include:

Business	Data	Application	Technology
Business Function Model	Conceptual Data Model	Application Services Model	Technology Services Model
Business Model Canvas	Logical Data Model	Application Component Model	Technology Component Model
Business Capability Model	Data Entity Catalog	Interfaces Catalog	Technology Portfolio Catalog
Business Motivation Model	Attribute Definition Catalog	Application Flows Diagram	Environments & Locations
Business Process Model	Data Entity/Business Function Matrix	Systems Integration Viewpoint	Networking/Computing Hardware
KPI Model	Data Mastery Model	Application Portfolio Catalog	Application/Technology Matrix
VPECT/SWOT	Information Flows	Application/Data Matrix	Technical Standards Catalog
