ENTERPRISE **ARCHITECTS**

IT Strategy

Service Definition

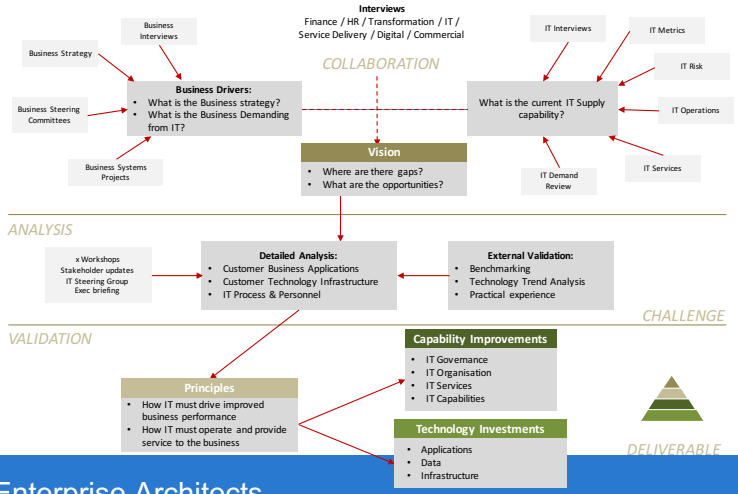
Enterprise Architects (EAL) will work with you to determine and document an IT Strategy that will specify strategic drivers, vision and principles, capability improvements, technology investments, roadmap and delivery plan. The primary purpose of the IT Strategy is to align IT capabilities with the business strategy and requirements. The IT Strategy will be used to communicate shared objectives and to guide decision-making:

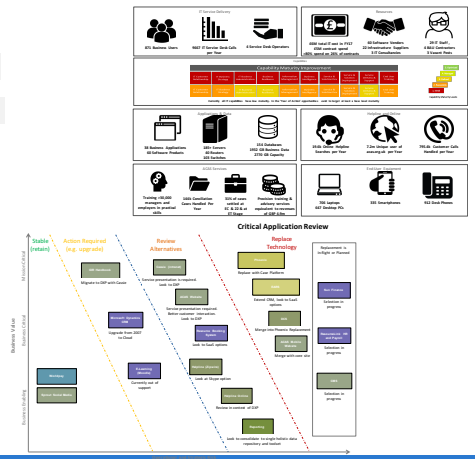
- Ensuring that the IT budget is spent on value creation activities for the business;
- Helping to maximise the return on IT investments.

How we deliver this service

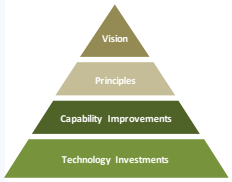
EAL will use its proven IT Strategy Framework Product™ to provide a well-defined delivery roadmap that can be used to support delivery of IT transformation programme/projects and work packages that will seek to modernise key areas of the core Technology capability.

The key areas of focus for the IT Strategy will include validating the business and IT context, developing the business and IT vision and principles, determining the required capability improvements, technology investments and providing a clear set of unambiguous roadmaps and delivery plans.





Deliverables



Vision

An ideal 'future state' view of information technology – includes Mission Statements and Goals

Will set the direction and drive Organisation-level planning

Principles

A set of guidelines that articulate *how* the Vision should be achieved

Will guide project investments and solution design decisions

Capability Improvements

A collection of targeted changes to governance, structure and process, shaped by the Vision and Principles

Will be used to achieve a step-change in overall IT maturity

Technology Investments

A series of tactical and strategic IT projects which, in tandem with, will realise the 'future state', set out in the Vision

Will run in parallel with business projects over 2-3 years and transform critical IT systems
